

SURPRISE POPOOLA

DEVOPS ENGINEER

popesurprise@gmail.com

<http://www.linkedin.com/in/popesurprise>

EXECUTIVE SUMMARY

Hands-on Cloud and DevOps Engineer with proven ability to design, deploy, and manage scalable infrastructures using modern DevOps practices. Skilled in building CI/CD pipelines with Jenkins and Git, containerization with Docker and Kubernetes, and applying Infrastructure as Code (IaC) with Terraform. Experienced in deploying applications on AWS, integrating configuration management with Ansible, and implementing monitoring and logging solutions with Grafana and ELK to improve system reliability and visibility. Adept at troubleshooting, automating workflows, and collaborating across teams to streamline release management and reduce downtime. Demonstrated success through multiple projects involving infrastructure deployment, application rollout, and operational optimization, committed to delivering secure, efficient, and DORA-aligned DevOps practices that support continuous improvement and business growth.

SKILLS AND TOOLS

- Cloud Computing: AWS, Azure, and Google Cloud Platform.
- Languages: Powershell, Bash Shell, Python, Groovy, YAML, Javascript.
- Databases: MySQL, MongoDB, DynamoDB, RDS, PostgreSQL, Oracle, MS SQL Server, Kafka, Redis.
- Tools: Linux, Windows, Docker, Kubernetes, Jenkins, Nexus, Apache, Nginx, Git, Gitlab, GitHub, Visual Studio, PyCharm, JSON and XML, VMWare, Hyper-V, Grafana, Prometheus, ELK, Cloudflare, DataDog, GraphQL, Active Directory, Windows Server.

PROFESSIONAL EXPERIENCES

DevOps Engineer – First Bank PLC. (Contract) JULY 2025 - PRESENT

- Implement DevOps best practices and optimize CI/CD pipelines to achieve ELITE performance levels in DORA metrics:
 - Deployment Frequency: Multiple deployments per day
 - Lead Time for Changes: Less than 1 hour
 - Time to Restore Service: Less than 1 hour
 - Change Failure Rate: 0-15%
- Integrated AI-driven code review processes, reducing code review time by 35% while maintaining high code quality standards.
- Continuously enhance these metrics through automation, comprehensive testing, and streamlined incident response, fostering a culture of continuous improvement and operational excellence.
- Source Code Management - Git workflows for version control
- Contributed to the development and maintenance of data pipelines, utilizing Looker, dbt, Fivetran, and Big Query for data integration and transformation.

- Design and implement robust CI/CD pipelines using Git/GitHub, CircleCI, Typo, Swarmia, Shell scripting, Groovy scripting, Maven, SonarQube, Nexus, Jenkins, CloudFormation, Karpenter, Docker and Kubernetes reducing deployment time by 35% and ensuring 99.9% build reliability.
- Server provisioning and feature deployment using Ansible, Nginx, and Apache
- Building and deploying Docker containers for implementing Microservice Architecture from Monolithic architecture
- Oversaw 100+ containerized applications, ensuring 99.9%+ availability and zero-downtime scaling with Kubernetes and Docker Swarm, ensuring seamless microservice scaling and zero downtime.
- Incident Management, Root cause Analysis, develop runbooks and scalability of web applications.

Used DevOps (CI/CD) to manage Software Development Lifecycle, collaborating with developers in intercontinental hubs: Design, manage & automate CI/CD pipelines for applications in different environments using tools; Azure DevOps, WAF, Firewalls, Bash shell scripting, SonarQube, Nexus, Maven, Docker & Kubernetes.

- On-call duties to ensure apps and servers are always optimized.
- With New Relic, I focus on detecting and analyzing anomalous behavior by identifying unexpected changes or deviations in data, as well as proactively extending the detection coverage for our customers.
- I support high-availability systems by automatically detecting and remediating problems while constantly optimizing.
- Log monitoring using Datadog, CloudWatch, CloudTrail, ELB logs, VPC Flow, Route53, Elasticsearch, Logstash and Kibana
- Developing and maintaining the software in security and regulatory compliance environments (PCI-DSS, HIPAA, SOC 2, ISO 20007)

DevOps & Cloud Engineer – Techscale Solution MARCH 2021 - APRIL 2025

- Deployed Red Hat OpenShift clusters across on-premises and cloud environments (AWS/Azure), integrating automation tools like Helm and Terraform for seamless scaling.
- Continuously enhance these metrics through automation, comprehensive testing, and streamlined incident response, fostering a culture of continuous improvement and operational excellence.
- Led the migration of hybrid and on-premises monolithic infrastructure to microservices on AWS, GCP, and Azure, reducing operational costs by 30% and improving deployment scalability.
- Executed seamless database backup and migration from on premises to AWS cloud, leveraging automation scripts to reduce downtime by 80%.
- Conducted comprehensive security audits across AWS, GCP, and Azure, identifying and mitigating 95% of critical vulnerabilities, ensuring PCI-DSS and ISO 27001 compliance.
- Integrated Static Application Security Testing (SAST) into CI/CD pipelines using SonarQube and Jenkins, reducing production vulnerabilities by 40%.
- Achieved ISO 20007 compliance using Drata, improving organizational security posture and building customer trust through regulatory adherence.
